Layawayed token transfer scenario

BEFORE ERCX STANDARD

Alice has taken an ERC721 apartment on layaway on one of the existing ERC721 layaway solutions. Now she incurred in some financial losses, so she can't afford to keep paying installments.

Alice uses a token marketplace which supports her wrapped apartment token to try to sell it.

David accepts the offer and buys it.

David can now access the apartment as long as he keeps paying the remaining installments. Alice has managed to get back some of the money paid for the layaway.

AFTER ERCX STANDARD

Alice has taken an ERCX apartment on layaway on one of the existing ERCX layaway solutions. Now she incurred in some financial losses, so she can't afford to keep paying installments.

Alice publishes a layawayed token transfer proposal on an intermediary contract for ERCX layaways; David accepts the proposal.

David can now access the apartment as long as he keeps paying the remaining installments. Alice has managed to get back some of the money paid for the layaway.
